Cloud Connect

Enable integration of local environments with cloud resources

Many companies are migrating to hybrid cloud environments to leverage the highly scalable experience offered by the cloud.

Cloud Connect is a technological solution that enables a secure and efficient connection between resources and services of a local or private network and cloud services. This optimized connection ensures fast, dependable, and secure access to resources stored on cloud platforms, such as servers, applications, or data storage.

Cloud Connect provides secure, high-performance, and virtualized network services to leading public clouds, as well as private clouds. The global reach of our network, and connectivity options using Wavelength, Carrier Ethernet or IP VPN services meet today's business requirements for hybrid cloud deployments.

Enhanced Management: Real-time visibility of Network end-to-end, performance metrics to assist with your network planning, troubleshooting and fine-tuning for an optimal performance.

Standard options and capabilities

Reliable performance

Keep end-to-end control of your applications performance while migrating to the public cloud.

Simplified security

By choosing private connectivity any application migrated or in the cloud will be in your trusted perimeter.

Global Connectivity

Connect your offices across the world to the cloud with the necessary data center resources to execute our critical-mission applications.

Benefits

Performance

Fast and seamless transportation for cloud-based, mission-critical applications.

Security

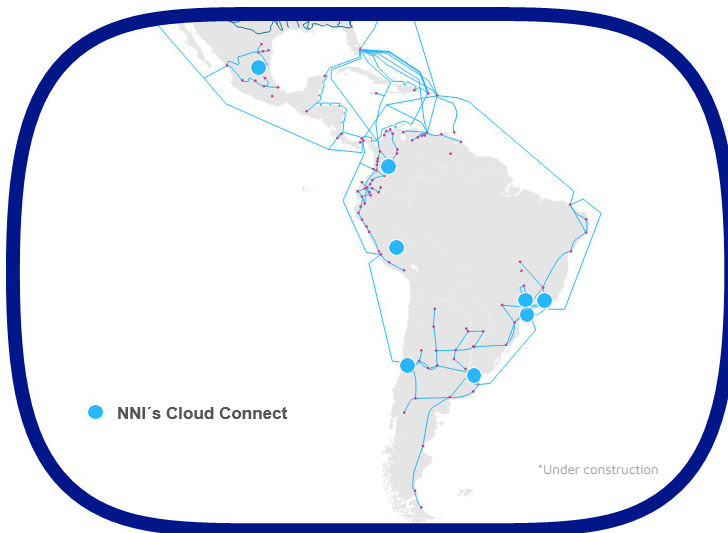

Private connections to CSPs to minimize threats, with a security service portfolio.

Flexibility

Cloud services choice that combines customer needs with the ability to scale network and bandwidth requirements.

Global Connectivity

Worldwide connection of your offices¹ to the cloud and local Data Center resources*.

Cloud Providers

- Amazon Web Services® Direct Connect
- Microsoft® ExpressRoute™
- Google® Cloud Partner Interconnect
- IBM® Cloud Direct Link
- Oracle® Cloud Infrastructure FastConnect

*More cloud computing providers available. Please contact your Cirion sales representative.

¹Access options vary by site.

Cloud Connect Solutions give you choice and control, seamlessly connecting your private and public cloud environments through pre-established private connections with leading cloud service providers. Our network is as flexible and agile as the cloud, seamlessly connecting your cloud environments through secure, private connections to leading cloud service providers.

We deliver secure, high-performance connections to Amazon Web Services, Microsoft Azure, Google Cloud, IBM Cloud, Oracle Cloud Infrastructure and many other leading public and private clouds. Designed to meet today's business requirements for hybrid clouds, including those for increased visibility that give users a network experience that matches your cloud experience.
